

Packaging

With the increase in color richness and intensity of pavers using the ColorScape® EverBold® system, scuffs may be more noticeable than compared to pavers not using the system. Pavers using the system do not scuff easier than pavers not using the system. To help minimize the potential for scuffing we recommend the following:

Packaging:

1. Use separator sheets between layers when cubing the product. Options include:
 - Min ¼" thick, closed cell foam for heavily textured products.
 - Plastic mesh/grid sheet for smooth surface pavers (not recommended for heavily textured pavers).
 - Heavy geotextile fabric (landscape fabric).
2. Place cubes of products on wood pallets to minimize the movement of pavers in the cube during handling/movement of cubes.

For Best Results:

- ¼ inch closed cell foam
- Ensure that packaging extends across the layers

Closed cell ¼ inch foam roll
