Technology and Innovation

Innovation is not just a buzz word for us. ColorScape® EverBold® introduces new chemistries and manufacturing techniques to paver producers in North America.

ColorScape® EverBold® is a new proprietary paver manufacturing system that incorporates integral admixtures and in-line treatments.

ColorScape® EverBold® pavers show deeper, richer colors and improved acid rain resistance that reduces paver color fading over time.

Unlock the natural beauty of pavers, and extend color fastness with a proven technology that is applied during the manufacturing process.

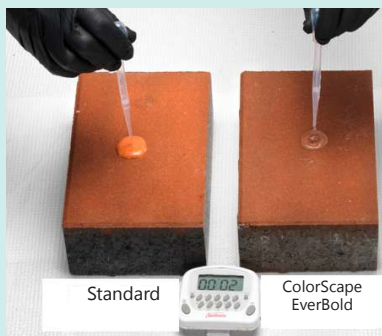

ColorScape® EverBold® in-line treatments are water-based and environmentally

Photo left - ColorScape® EverBold® pavers in left 4 rows. Standard pavers from the same pallet and production run in right hand row. Photo taken several days after manufacture.

Photo top - ColorScape® EverBold® and standard pavers exposed outdoors for 8 months after manufacture.

Acid Rain Resistance

Standard and ColorScape® EverBold® pavers tested with a concentrated solution of muriatic acid for 2 minutes. Note the etching on the standard paver.
