

Efflorescence Control and Improved Quality for Pavers and SRW

ColorScape® multi-functional admixtures enhance and protect Concrete Pavers and Segmental Retaining Walls

ColorScape® pavers and segmental retaining wall (SRW) units exhibit improved concrete quality and achieve higher density, lower absorption and higher strengths required to produce superior durability and performance in the field.

- Primary efflorescence control
- Secondary efflorescence control
- Improve color integrity
- Improve texture definition
- Improve feed and compaction
- Reduce cycle times, faster production
- Improve strength and density
- Improve freeze-thaw durability

Technology and Innovation

Innovation is not just a buzz word for at ACM Chemistries.

ColorScape® introduces new chemistries and manufacturing techniques to paver and SRW producers in North America.

ColorScape® admixtures are multi-functional

- One dispenser covers multiple product needs
- Save on inventory costs
- Reduce complexity.
