

Concrete Admixtures for Hardscape and Masonry Construction

From parking lots to penthouses, concrete products are our focus and our passion. We strive to be the best at what we do.

Our products enhance and protect designer hardscapes, sustainable buildings, engineered segmental retaining walls and many others:

RainBloc® System includes integral water repellent and mortar additives for Architectural CMU

- Increase resistance to wind-driven rain and moisture penetration
- Reduce efflorescence
- Annual certification program for approved Producers

Integral Admixtures for Pavers and SRW

- Reduce efflorescence
- Improve strength and density
- Lower absorption

Integral Admixtures for Standard Grey Block, Dry-Cast and Wet-Cast units

- More efficient machine cycle times
- Improve physical properties

Integral Admixtures for Segmental Retaining Walls

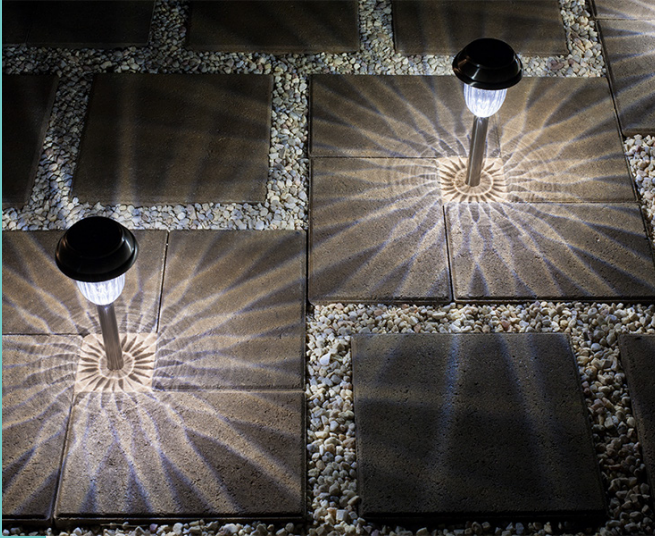

- Strong densifier to improve strength, density and freeze-thaw durability
- Reduce efflorescence

Technology and Innovation

Innovation is not just a buzz word for us.

We invest in chemistries and manufacturing technology to benefit our customers and the industry.

NEW!

InLine Treatment for Pavers

- Color enrichment
- Color fastness
- Stain resistance
- Acid rain resistance

Services

When you need expert and experienced technical support, leading technology and service, ACM Chemistries works for you. We will work with you to produce the best concrete products that you wish to make.

Testing and Troubleshooting

- Compressive strength, density and absorption
- Water repellency
- Freeze-thaw durability

Mix Design and Materials Optimization

- Optimize grading curves
- Blending cementitious materials
- Recycled materials
- Admixture synergies

Operations Analysis and Optimization

- Batching and mixing cycles
- Density and absorption
- Curing and kiln operations

Education and Training

- ½ to 2 day courses
- Atlanta GA, or your location
- Presentations, hands-on demos and extensive handouts
